March 2010

Newsletter

First Harvest 2010 Began Thursday 25th February 2010

Our early varieties have ripened with good cone development and high yields, all other varieties are set to finish well. The trellis and wire work is groaning under the weight of full bines with good size cones.

As we have reported earlier good rains over January / February together with the extensive drip irrigation expansion program undertaken by Ellerslie has resulted in a well managed watering program which saw us commence harvest on Thursday 25th February.

By working closely with our soil agronomist and plant tissue specialists for many years, we have been able to tailor our nutrient requirement for individual gardens thereby increasing yield per hectare. Our preliminary data is showing that we have significantly reduced our total water consumption per hectare while maintaining a complete nutritional and micro-organism balance within the soil and bine structure.

Ellerslie - Continuing our philosophy of securing the land for future generations.
